Summary

At Vevo Therapeutics, I led machine learning initiatives from seed funding, establishing the technical foundations for a scRNA-seq drug discovery platform. My graduate research in sequence-based representation learning informed our strategy, leveraging my experience in integrating chemical and omic features to predict and understand drug responses. I enjoy working in collaborative environments and communicating industry developments to the broader community.

Education

University of California, San Francisco — *San Francisco, CA*

PhD in Pharmaceutical Sciences and Pharmacogenomics — *2018 - 2022*

- Advisor: Michael Keiser
- Committee: Hani Goodarzi, Luke Gilbert

University of California, Los Angeles — *Los Angeles, CA*

BS in Microbiology, Immunology and Molecular Genetics — *2012 - 2016*

Experience

Vevo Therapeutics — *San Francisco, CA*

Research Scientist, Machine Learning — *September 2022 - January 2024*

- Developed and executed strategy for a scRNA-seq foundation model (scFM), expanding the pretraining corpus 65x and significantly improving target retrieval, sensitivity prediction, and biological recapitulation tasks
- Conceived and delivered a multimodal model aligning transcriptomes and chemical structures, achieving a 10x increase in top-k accuracy
- Initiated the ML strategy for chemical graph generation using transcriptional profiles for phenotype-guided small molecule design
- Led a proposal accepted into the AWS Gen AI Accelerator program (<1%), securing $300k compute credits and industry recognition
- Managed contractors, recruited three FTEs, and mentored an intern, growing the ML team by 50%

Department of Pharmaceutical Chemistry, UCSF — *San Francisco, CA*

Graduate Researcher advised by Michael Keiser — *March 2019 - December 2022*

- Pioneered the application of self-supervised learning to scRNA-seq, advancing the pretrain/finetune framework in biological modeling
- Developed an *in silico* model for chemical probing (+10% baseline), finding new indication responses and potential ferroptosis drug targets
- Identified a genomic biomarker to stratify mAb ustekinumab response in psoriasis, advancing personalized treatment decisions

AI Research Group, Invitae — *Remote*

Computational Biology Research Intern — *May 2021 - August 2021*

- Aided in developing a hierarchical Bayesian model to enhance polygenic risk scoring accuracy
- Involved in comprehensive software and pipeline engineering for efficient management and analysis of large-scale datasets

UCSF Innovation Ventures — *San Francisco, CA*

Catalyst Awards Intern — *September 2018 - September 2019*

- Assessed scientific translation potential of a diagnostic gene expression biomarker panel, collaborating with corporate strategy experts
- Headed a team of four scientists to develop a Target Product Profile, resulting in a $100k translational funding award
- Performed product development feasibility studies, yielding a comprehensive report and pitch to venture investors

Datacamp — *Remote*

Project Developer — *November 2019 - January 2019*

- Crafted and delivered a data science project for a premier online educational platform
- Developed an interactive data analysis course in R, *Data Science for Social Good: Crime Study*
- Successfully engaged over 2000 learners, achieving a course rating of 4.7/5

Presentations

Quantifying the similarity of transcriptomic states in cancer
William Connell, Michael J. Keiser
CZI Neurodegeneration Challenge Network 2020 Annual Meeting. Poster. 2020. Virtual.

Target deconvolution across phenotypic space
William Connell, Garrett Gaskins, Michael J. Keiser
Northern California Computational Biology Symposium. Oral. 2019. Davis, CA.

Extracurricular Activity

Behind BioML *Remote*
Substack, writing *Current*
- An emerging business model in drug development
- Scaling biology – part 1
- Computation through the lens of biology
- ML for target identification
- The evolution of ML in early-stage drug development

SynBioBeta *San Jose, CA*
Foundation Models for Bio Panel *2024*
- Moderator for panel discussion: technical overview, role of data, model evals, and impact on industry verticals

ICLR *Remote*
MLGenX Workshop Reviewer *2024*
- Machine Learning for Genomics Explorations workshop (reviewer)

OpenBioML *Remote*
DNA Diffusion, Contributing Member *August 2023 - Present*
- Contributed to OS research focusing on *in silico* generative sequence design
- Led the creation of an oracle model for assessing DNA sequences, improving baseline model 18x
- Coordinated scientific and technical efforts among a diverse group of global collaborators

Skills

programming	python [numpy, pandas, pytorch, scikit-learn, huggingface, wandb, lightning, pytorch-geometric, rdkit, hydra], AWS, R, bash, git, plink, snakemake
OS contributions	enformer-finetune, pytorch-metric-learning, scikit-learn sprint (WiMLDS)
model repos	ChemProbe, Exceiver
